EDUCATION

University Of Michigan

Bachelor's of Science: Computer Science

May 2024

GPA: 3.6

Relevant Coursework: Data Structures and Algorithms, Web Systems, Machine Learning, Human-Centered Software Development

PROFESSIONAL EXPERIENCE

Broadridge

Associate Software Engineer

Newark, NJ

July 2025 - present

- Contribute to full-stack development of an enterprise tax processing platform using Java (backend), HTML/CSS (frontend), and XML-driven workflows, delivering compliant Canadian tax form updates aligned with evolving regulatory schemas
- Enhance a Java-based mainframe-to-XML conversion pipeline, transforming legacy tax slip files into structured XML for downstream processing and reporting systems
- Implement fractional share reporting logic across backend services and UI components, improving data accuracy and supporting expanded investment product capabilities
- Perform dependency upgrades, refactoring, and modernization of Java services and frontend components to improve maintainability, application stability, and long-term scalability
- Design and developed file-processing and batching logic to split and handle large tax datasets efficiently, optimizing performance and reducing processing bottlenecks
- Collaborate across backend and frontend layers to deliver updated UI layouts reflecting new tax slip structures, improving usability and data visibility for internal users

Career Foundations Program Trainee, Technology Track

July 2024 - July 2025

- Completed multiple rotations across Global Technology & Operations, developing hands-on expertise in agile software development, cross-functional business strategy, and global collaboration and communication
- Developed a Python script with the Yahoo Finance API to determine mutual fund asset percentage makeups, facilitating the creation of a new composite benchmark to enhance analysis of wealth clients' investment decisions
- Enhanced AWS Lambda functions to automate the scaling of ECS clusters based on predefined thresholds and orchestrate EC2 instance restarts, reducing manual intervention and improving operational efficiency
- Designed and implemented Splunk alerts to extract and enrich transaction message data from the production environment, enabling efficient cross-checking and alignment of critical data fields across systems

KEY PROJECTS

AI-Powered Developer Productivity VS Code Extension

July 2025 - present

- Built an AI-assisted, automated PowerPoint generator for quarterly progress reporting, dynamically extracting project data, and applying consistent visual formatting with color-coded indicators and graphics
- Develop agentic workflows to pull and process mainframe files directly, allowing for modernization conversions and cpu usage analysis to reduce load and cost
- Integrate MCP connectivity with Jira and Confluence, enabling seamless retrieval and synchronization of tickets, requirements, and documentation within the development environment

Project Management Acceleration Through AI

October 2024 - April 2025

- Created a PowerBI page to flag alerts that track changes in RAG status, burn rate, forecasted cost, and revenue across projects in the onboarding portfolio
- Developed an AI chatbot from scratch with Python backend and Flask/React frontend that queries onboarding project data to give insights on alert data to be used in Grand Central meetings
- Built an AI-assisted, automated PowerPoint generator for quarterly progress reporting, dynamically extracting project data, and applying consistent visual formatting with color-coded indicators and graphics

SKILLS AND CERTIFICATIONS

- Programming Languages: Python, Java, JavaScript, React, C++, C#, HTML, CSS
- Proficiencies: Visual Studio Professional, Unqork, Splunk, Excel, PowerPoint, PowerBI
- Certifications: Amazon Web Services Certified Cloud Practitioner
